**Nexiva**

# Company Profile

Nexiva is an innovative digital token platform designed to redefine the way people interact with value, assets, and financial ecosystems. Built on advanced blockchain technology, Nexiva provides a secure, transparent, and efficient environment for users to create, manage, and trade digital tokens with ease.

Our platform empowers individuals and businesses by offering decentralized solutions that eliminate intermediaries, reduce costs, and enhance transaction speed. Nexiva aims to bridge the gap between traditional finance and the digital economy, making tokenization accessible to everyone.

# Nexiva

## Tokenization Of Assets

Assets such as gold, real-estate, rare art, or even crypto tokens can be converted into one or more digital tokens on the blockchain (also called “tokenised assets”).

## NXV Shares / Tokens:

When you deposit into the vault, you typically receive a “share” token representing your portion of the vault’s total assets (often via standards like ERC 4626).

## Yield, Liquidity, & Secondary Markets:

The vault can deploy underlying assets (or the tokenised real assets) in different strategies, or just hold them securely while you trade the share tokens. you also benefits when underlying value increases.
